0.1 Coucou les enfants !

This is my abstract!

(<https://jupyterbook.org/stable/get-started/export-pdfs/>)

I am a book about ... something! Wikipedia has information about books: hover over the link for more information.

- **jupyter-book init** : initialise a project.
- **jupyter book init --write-toc** : autogenerate a Table of Contents
- **jupyter-book start** : built-in server that renders your book as a locally-served website.
- **jupyter book build --pdf** : building a pdf

0.1.1 Export PDFs

jupyter book templates list --pdf

- `lapreprint-typst`
- `arxiv_nips` : An arXiv compatible template based on the NIPS 2018 Style
- `arxiv_two_column` : A two column arXiv compatible template
- `frontiers` : A template for the Frontiers In range of Journals
- `volcanica` : A template for submissions to the Volcanica journal
- `curvenote` : A paper styled template using the custom environments and styling to match Curvenote Web
- `plain_latex` : A minimal template that only uses vanilla LaTeX commands and environments
- `plain_latex_book` : A plain latex book theme
- `springer` : Official template for Springer journals
- `ieee-typst` : IEEE Template from Typst app, updated as a MyST template
- `plain_typst_book` : Easily create beautiful books in Typst

jupyter book templates list --typst lapreprint-typst

LaPreprint Typst Template : lapreprint-typst Parts:

- `abstract` (required) - An abstract is a short summary of your research paper or report. A good abstract will prepare readers for the detailed information to follow, communicate the essence of the article and help readers take away and remember key points.
- `summary` - Plain language summary
- `acknowledgements` - Acknowledgements printed in the margin
- `availability` - Data availability statement printed in the margin

Options:

- `logo` (file) - An image path that is shown in the top right of the page
- `kind` (string) - The “kind” of the content, e.g. “Original Research” - shown as the title of the margin content on the first page
- `short_citation` (string) - The short citation used in the document header. By default, it is automatically determined from the author names.
- `heading_numbering` (string) - Heading numbering style.

Finalement :

- **jupyter book build intro.md --tex** et faire pour chaque fichier. Mais impose de nettoyer le tex et d’avoir une classe pour le template avant de compiler en pdf “à la main”.
- **jupyter book build --pdf** compile tous les fichiers en pdf avec le format défini dans le front-matter de `myst.yml` :

exports:

- `format: pdf`
- `template: lapreprint --typst`
- `articles:`
 - `intro.md`
 - `page2.md`
 - `page3.md`
